Profile

Experienced Software Developer with a proven track record in project development, website rebuilding, and backend development. Adept at crafting robust APIs and managing complex databases. Seeking a collaborative environment to leverage my expertise and contribute to organizational growth.

Skills

- Node.js
- Typescript
- React Native
- NextJs
- HTML & CSS
- Cloud Computing

Projects

Flowflex, Full Stack Developer

2024 Apr – present

Served as a key backend developer on a multi-organization branches handling software, contributing significantly to a microservices architecture. Created numerous services using a variety of tools tailored to specific requirements, including GCP services (Pub/Sub, Workflow, Functions, VM instances), Node.js, Kafka, Redis, Shopify, and Next.js. Additionally, contributed to the frontend development of certain components. Demonstrated proficiency in designing and implementing scalable, efficient, and reliable backend solutions within a complex microservices ecosystem.

Dentobees, Software architect

2024 Jan – present

Conducted in-depth research on dental clinic management software architecture. Designed the backend structure and logic to efficiently handle a variety of dental procedures and patient appointments, ensuring seamless workflow and optimal resource allocation.

Escala, Full Stack Developer

2023 Dec – present

I played a crucial role in developing a comprehensive garage management software utilizing Node.js for the backend and React for the frontend. Engineered a user-friendly dashboard to effectively track loyalty points and other essential metrics. Implemented robust features to streamline garage operations, including inventory management, and customer relationship management.

Swiss Arabia, Backend developer

2023 – present

I played a crucial role in developing a robust Shopify backend using Node.js and Shopify Remix to power a perfume selling platform. Leveraged ngrok to streamline local development and testing, ensuring efficient order processing and real-time data synchronization with the client-side application.

Review Scrapper, Full Stack Developer

2023 – present

Developed a sophisticated software utilizing Node.js and Next.js to efficiently extract and analyze customer reviews from Amazon products. Employed Inngest to automate scraping tasks and Playwright to navigate and extract data from Amazon's web pages. The software delivers detailed review summaries and insights directly to the user's email, providing valuable market intelligence for informed decision-making.

Professional Experience

Software Engineer, Reviewbit

2023 – present

Calicut, India

As a Backend Developer, I played a pivotal role in developing and maintaining robust API services using Node.js, TypeScript, and MongoDB. I collaborated closely with frontend teams to ensure seamless integration and provided essential supporting code for Shopify services and web applications. To streamline our workflow and enhance collaboration, I leveraged tools like Slack, Jira, and Postman collections. I actively contributed to research and development efforts, exploring innovative solutions for various client projects. Additionally, I was responsible for performing and directing updates to websites, ensuring optimal performance and functionality. My experience also includes data scraping projects, where I effectively utilized tools like Ingest, Ngrok, and TypeScript to extract and analyze relevant data.

Campus Ambassador, World Cyber Security Forum

2022 Apr – 2022 May

Delhi, India

Prepared and edited organizational publications and materials for both internal and external audiences to deliver important information. Developed marketing campaigns for cybersecurity law services.

Education

Bachelor of Computer Science, Calicut University

2021 Jun – 2024 Mar

I worked on a ecommerce site for selling laptops and main project which was a project management app.
