## PROJECTS

---

### Tripzinga

Tripzinga is a comprehensive tour management platform designed to streamline the travel planning experience for users. Key features of the project include:

- User Authentication:** Secure sign-up/login with account management options.
- Profile Management:** Update profiles and change passwords easily.
- Trip Planning:** Add/manage trips with detailed travel plans.
- Budget Tracking:** Track per-person trip budgets by categories like food, accommodation, activities, and travel.
- Day-wise Itinerary:** Organize trips with a detailed daily schedule.
- Story Sharing:** Document and share travel experiences with the community.
- Master Packing List:** Track packing essentials to ensure readiness for trips.
- Trip Sharing:** Share itineraries, expenses, and stories with others, including unauthorized users for community building.
- Google Integration:** Extract itinerary locations and fetch relevant images using Google Place IDs.
- Subscription Management:** Manage premium features via Stripe, ensuring seamless payments

**Technologies used:** loopback 4, node js, typescript, mySql, google axios ( <https://tripzinga.com/> )

## District12

District12 is a pioneering application designed to help users follow social figures across multiple platforms, centralizing their social media presence to support a global cause. Key features of the project include

- The app allows users to follow their favorite social figures on various platforms from one place, simplifying the process of staying updated with their activities and contributions.
- The platform is designed to promote and support a global cause by amplifying the voices and activities of influential social figures.
- Users can engage with social figures' content directly through the app, enhancing interaction and connectivity.

District12 effectively combines social media integration and cause-driven engagement, making it a valuable tool for users looking to support global initiatives through centralized social media following and interaction.

**Technologies used:** loopback 4, node js, typescript, mySql
