WORK EXPERIENCE

UVATION INDIA | SOFTWARE ENGINEER   Delhi, India | Sep 2023 – Current

- Engineered notification systems across multiple platforms, including **Rewards**, **Identity**, **Support**, and **USP**, using **Node.js**, **Express**, and **PostgreSQL**, ensuring seamless and reliable communication between services.
- Developed and optimized **RESTful APIs**, building scalable, secure, and high-performing back-end systems that supported diverse platform integrations.
- Created dynamic content for various products and services, boosting user engagement and contributing to sustained business growth.
- Led infrastructure development that supported real-time notifications and transactions, helping achieve a minimum of **$100K** in monthly sales through optimized systems and seamless platform operations.
- Designed reliable, scalable systems that enhanced efficiency, improving overall performance and driving consistent revenue increases.

SEDAUX TECHNOLOGY | SOFTWARE ENGINEER   Noida, India | Jul 2022 - Aug 2023

- Worked as a **Software Engineer**, building and implementing the backend for the **Gourmet Planet** application, which is available on the Play Store. This application helps users find restaurants in their city that offer reasonable prices based on availability.
- Developed the **Admin Portal** for **Gourmet Planet** using **Node.js**, **Express**, **React.js**, and **PostgreSQL**, ensuring a robust and user-friendly interface for restaurant management.
- Built reliable, scalable, and secure **RESTful APIs** to facilitate seamless communication between the front-end and back-end, enhancing the overall performance of the application.
- Built and implemented the backend of the **Attendance Pro** application, including the **Admin Portal**, from scratch using **Node.js**, **Express**, **React.js**, and **MySQL** for the database. This system maintained comprehensive employee records, including login and logout times with location and photo, leave requests, holidays, and working hours.

NICKELFOX TECHNOLOGIES | SOFTWARE ENGINEER   Noida, India | Jul 2021 – Jun 2022

- Worked as a **Software Engineer**, developing and implementing the backend for the **IT Tracking System** from scratch using **Node.js**, **Express**, and **PostgreSQL**.
- Designed a robust system that allows employees to raise tickets for technical issues related to their systems, ensuring a streamlined workflow for issue resolution. The IT admin reviews the tickets, addresses the reported problems, and closes the tickets upon resolution, enhancing operational efficiency.
- Built reliable, scalable, and secure **RESTful APIs** that facilitate seamless communication between the front-end and back-end, improving user experience and system reliability.

SKILLS
