TypeScript

AWS Lambda

PROJECTS

E-Commerce Website like John-Jacob (06/2021 - 12/2021)

- Developed an e-commerce platform for spectacles similar to John-Jacob, focusing on user friendly design and seamless shopping experience.
- Developed a feature allowing users to filter spectacles by price, material, frame type, shape, category, gender and color for a customized shopping experience.
- Implemented an admin dashboard that allows for adding, updating and deleting products, providing easy management of the e-commerce platform
- Frontend developed using React and Material-UI, with the backend powered by NodeJS for a seamless and responsive e-commerce platform.

Stock Market Website (PraedicoFinance.com) (11/2021 - 05/2022)

- Collaborated with a teammate to develop the entire website for selling and buying virtual stocks using ReactJS for the Frontend and NodeJS for the backend.
- Redeveloping an existing PHP application using upgraded technologies (ReactJS, NodeJS and MySQL) to enhance security performance.

Project Builder (09/2022 - Present)

- Developed a module for Schneider Electric Application where users can add products to a table through multiple ways. The modules includes features for managing the table, such as exporting data, sharing via email, creating infinite nested groups, and moving products between groups. Additionally, the products can be transferred to other services.
- This application is used in multiple countries, so we implemented a translation management system to support various languages and regional preferences.
- The Frontend is developed using SvelteJS, while the Backend is built with NodeJS and TypeScript utilizing AWS CDK for deployment on AWS lambda.

Project Builder Backoffice (01/2023 - Present)

- This application is a back Office for Project Builder. It is use to manage each and every translation for Project Builder.
- We as a developer can provide access to users for what languages the admin can change.
- Firstly, initial translations will be shown to user who logs in Backoffice, that is translates through Schneider API.
- Front End is implemented in svelte and backend in NodeJS and database is Aurora DB.

ACHIEVEMENTS

Skill certificates in java, JavaScript, Problem Solving, MySQL and python from HackerRank.

Badge in C, C++, HTML, Python, CSS and Frontend Developer from LinkedIn.

2nd prize in pick an error organizes in our college.

Promoted to Engineer from Associate Engineer in Nagarro.

CERTIFICATES

HTML certificate from skill care (01/2021 - 02/2021)

Python for everybody from Coursera (09/2020 - 10/2020)
