PROJECTS

Avery Telehealth Solution

📅 Present

The application allows patients to monitor and manage their health data seamlessly. It supports comprehensive health management through integration with Vital Reading devices.

- Requirement discussion with the client and BA team for requirement analysis and working on the APIs.
- Developing frontend and backend as per the requirement.
- Deployment of code over staging as well as production servers.

Goodie Bag

📅 01/2023 - 01/2024

Application provides a platform to the users to get the food through their local vendors. Restaurants can list their unsold and surplus food at discounted rates and users can book their slot as well as the bag size for pick up at preferred time slots

- Implemented the project from the ground up.
- Requirement discussion with the client and BA team for requirement analysis and working on the APIs.
- Backend development as per the requirement.

Avaya One Source Configurator (A1SC)

📅 01/2021 - 12/2022

Application provides user to customize their products per their need. User inputs are processed using configurator at backend to get the cost optimized products.

- Worked on the project as a full stack developer and added numerous features to meet the client's requirements.
- Provided detailed document and implemented features.

SKILLS

Node JS	Express JS	API
MongoDB	JavaScript	React JS
HTML	CSS	C# ASP.NET
