PROJECT([HTTPS://WWW.WORKABROAD.PH](https://www.workabroad.ph))

- Developed and managed key backend features for a busy web app using Ruby on Rails, focusing on scalability.
- Created user interface with ReactJs, Redux, HTML, and SCSS to boost user interaction.
- Enhanced data retrieval efficiency in MySQL through optimized queries, leveraging indexing and query optimization techniques.
- Collaborated effectively with the development team to ensure efficient data management and system performance.
- Working as a backend developer for the job portal <https://www.workabroad.ph/>, employing tech stack Sql, Node, Mongodb, Aws, and Typescript.
- Focus on land-based and sea-based jobs for the job portal.
- Objective: Redesigning the user interface to enhance user experience for Philippine job agencies, job seekers, and international hirers.
- Implemented key features on WorkAbroad.ph including Talent Search, Simplified registration process, Job recommendations, and Easy hiring postings.
- Utilized technologies such as Node.js, Mysql, MongoDB, and React.js for the project.
- Employed a cloud-based architecture using AWS Fargate and backend microservices for the job portal.
- Utilized microservices technologies including AWS Lambda, Docker, Buildkite, and Gantry for the project.
