TRAINING / COURSES

Full Stack Web Development

Alma Better

EXPERIENCE

Associate Full Stack Developer

Byldd

11/2024 - 04/2025 Remote

Byldd is a startup development and acceleration company that helps SaaS and eCommerce founders build out their ideas into real-life, revenue-generating businesses

Frontend Developer

A1 Topup Services Private Limited

04/2023 - 06/2024 Hyderabad

A1Topup is a multi recharge software company offering a comprehensive suite of services for online mobile recharge, DTH recharge, Postpaid bill, Electricity bill, FASTag Recharge, Gas bill, Insurance premium and more.

PROJECTS

FLIX

04/2024

<https://ab-movies-frontend.vercel.app/>

The Movies project, a comprehensive solution for browsing, managing, and tracking movies and TV shows. Frontend, built with **React**, **Tailwind CSS**, **Redux Toolkit**, and **Axios**.

- Users find the platform intuitive, visually appealing, and easy to navigate.
- The platform offers a comprehensive set of features, including browsing, searching, filtering, and managing movies and TV shows.
- User data is securely managed and protected against unauthorized access or data breaches.

Thakur Hospital

07/2023

<https://thakurhospital.in/>

Welcome to Thakur Hospital. 10 Years Of Experience in Medical Services. One big thing I wanted to highlight is that our methodology is fairer to hospitals. The UI is built with using **React**, **Bootstrap CSS**, **Redux**.

Bada Engineering

06/2023

<https://github.com/Belalirshad/BadaEngineering.git>

Bada Engineering Pvt. Ltd. is An Innovative & Emerging Company. To Carry on the business of engineering mechanical, civil work, pipeline, the pipeline for gas & oil transmission, design, analysis, testing machines, complex systems and services to infrastructure. The UI is built with using **HTML**, **CSS**, **JavaScript**.

Boilerplate Generator

11/2024

Developed and implemented a Boilerplate Generator, a core project at Byldd, aimed at streamlining the setup and initialization of new projects across the company. This tool provides a standardized project layout, enabling teams to quickly start new projects with a well-structured codebase. It includes essential components such as a pre-built navbar, dashboard, and settings navigation, significantly reducing development time and ensuring consistency across multiple projects. The Boilerplate Generator was designed to enhance code reusability, maintainability, and productivity within the organization.

The project is built on **Nextjs**, **ChakraUI**, **Express**, **MongoDB**, **React Query**.

PROJECTS

Pitufo

📅 02/2025

Contributed to the development of Pitufo, a global online learning platform designed to facilitate seamless communication and learning between teachers, students, families, and administrators. The platform features multiple user roles, including teachers, students, family members, and admins, each with tailored functionality:

- **Teachers** can conduct live sessions and lessons for students using LessonSpace, enabling an interactive and engaging learning experience.
- **Students** participate in classes, track their progress, and access lesson content.
- **Family members** can monitor student attendance and payment status for classes, providing transparency and better involvement in the student's education.
- **Admins** manage the platform, ensuring smooth operation, user access control, and reporting.

This project aimed to enhance the accessibility and efficiency of online learning globally, with a focus on improving communication and transparency between all involved parties.
