PROFILE SUMMARY

With over 3 years of experience, I have developed and maintained applications that rely on stock market APIs and financial data. I have worked closely with senior developers to develop server-side applications using Node.js and Express.js. I have collaborated with cross-functional teams to design and implement Restful APIs for data retrieval and manipulation. I have implemented real-time features using WebSockets and integrated third-party APIs for enhanced functionality. I am proficient in using Axios, a popular JavaScript library for making HTTP requests, to fetch and manipulate stock market data. I have expertise in data parsing, transformation, and visualization to provide actionable insights to traders and investors. I have a proven track record of delivering high-quality code on time.

WORK EXPERIENCE

Oct 2020 - Present — Software Developer
Skyer Global Investment

Designed and maintained automated alerting systems. Collaborated with system administrators to integrate Task Manager API-based solutions into existing Infrastructure, resulting in improvised system stability and reduced downtime. Played a key role in documenting best practices and knowledge transfer sessions for team members on Task Manger API utilization. Integrated Axis with various APIs to collect and analyze data on client stock holdings and market trends. Created custom alerts and notifications to keep client informed of critical market developments. Implemented robust security measures to protect client sensitive financial data. Token used for user authentication, deletion on logout for better performance using redis. Conducted regular

meetings to provide performance updates and gather feedback for continuous improvement.

Projects

7 Weeks

Task manager and analysis

- Viewing stock charts specified by the manger.
- Breakpoint updation of stocks.
- Alerts for any breakpoint through node mailer.
- Pattern analysis.
- Created a great communication environment.
- Client and real time data of their stock
- Averaging is done with each acquisition of the same stock of the client.
- Total profit and loss is calculated of all the stocks with the
real time data using Axios.• Updating of investment amount and their monthly interest.

3 Weeks

Chat support

Implemented by using socket i.o to deal with any
customer to the client which ensured trust within the company
query raised by the and enhanced the relations.

2 Months

Developed APIs for E-commerce App

- User Management: User having different roles can access the data
according to his rights by creating middleware.
- Cart: Implementing cart for each user using mongoose model.
- Order: order placing and confirmation
- Payment using Stripe
- Blacklisting refresh token using Redis.
