### **Admin Panel –**

- Price set and management for Outstation, One way, Two Way, Rental
- Track cab along with Details of cab like Type, mobile number – few interval and few minutes based on less load on server.
- Create Booking by Admin
- Trip Details ongoing, advance booking, past booking

### **Following details is required from Vendor and developer**

- Details feature implementation logic and document
- Quotation, if possible, feature wise
- Monthly charges/Annual charges, Maintenance charges.

### **Noted Points-**

- Latest technology should be used. Scalable and expandable based on feature, business growth.
- iOS and Android compatible. it should be work on all the mobile Handsets
- No latency, no delay while using APP.
- customer and Driver should not uninstall and install APP again, if introducing any new feature.
- **Source code should be share, easily understand by any another developer. Request please do not participate/call in the bid if source code is not sharing.**
- APP BE database should be scalable, any annually/Monthly fees and any limitation should be informed before sign off of deal.

Currently we are asking following details from the customer, and manually assigning to the drivers.  
Which is already verified in the current App.

Final details we are sharing in the whatsapp no to Driver and customer.
